Item 8.01. Other Events.

On August 6, 2017, MagnaChip Semiconductor Corporation's fabrication facility in Cheongju, South Korea experienced a temporary power outage for approximately six minutes as a result of an accident involving a crane operated by a city contractor that impacted high voltage lines in the vicinity of MagnaChip's facilities. The fabrication facility was restarted after implementing standard back-up generators on the high voltage lines and is fully operational. The accident caused certain damage to our work in process wafers and fab equipment with an estimated total cost of up to \$1.5 million. In addition, the related impact to our revenue is estimated to be up to \$3 million, substantially all of which is expected in our current third quarter. Management is currently evaluating potential insurance and other claims that MagnaChip may have for the above loss and damages.
